

AMENDMENTS TO THE CLAIMS

**This listing of claims will replace all prior versions and listings of claims
in the application:**

LISTING OF CLAIMS:

1. (currently amended): A double-sided pressure-sensitive adhesive sheet to be used in sticking and fixing a touch panel to a display surface of a display device, one surface of the double-sided pressure-sensitive adhesive sheet being stuck substantially entirely on the touch panel, and the other surface being stuck substantially entirely on the display surface of the display device, wherein the double-sided pressure-sensitive adhesive sheet has at least two pressure-sensitive adhesive layers but does not have a substrate, is constructed such that it is repeatedly peelable against at least one surface of the touch panel and the display surface of the display device, and has optical isotropy; and wherein the double-sided pressure-sensitive adhesive sheet has a thickness of not more than 50 µm,

wherein the respective pressure-sensitive adhesive layers each comprise an acrylic polymer containing a (meth)acrylic acid alkyl ester in which the alkyl moiety thereof has from 1 to 18 carbon atoms as the major monomer component, and the major monomer for the respective pressure-sensitive adhesive layers is constituted from the same kind of monomer.

2. (original): The double-sided pressure-sensitive adhesive sheet according to claim 1, which has from two to five pressure-sensitive adhesive layers.

3. (canceled).

4. (original): The double-sided pressure-sensitive adhesive sheet according to claim 1, wherein at least one pressure-sensitive adhesive layer of the pressure-sensitive adhesive layers in the both outer sides has a 180°-peeling adhesive strength (to a glass plate or a triacetyl cellulose film at a peeling rate of 300 mm/min at 23°C) of not more than 5.0 N/20 mm.

5. (original): The double-sided pressure-sensitive adhesive sheet according to claim 1, which is used for fixing a display device to a touch panel in the inner touch panel system.

6. (currently amended): A touch panel-provided display device, wherein a display device and a touch panel are fixed to each other via the double-sided pressure-sensitive adhesive sheet according to any one of claims 1, 2, 4 and to 5.
